26-6-89

The winter of 1939-1940 was a very dry one. The water level in the river was very low. The water level in the river was very low. The water level in the river was very low.

The work was 26-27. Some are  
performed for the first time.

$27 = 624950$

The purpose of the experiment was  
 to determine the effect of the  
 concentration of the solution on the  
 rate of reaction. The results  
 showed that the rate of reaction  
 increased with the concentration  
 of the solution. The rate of  
 reaction was measured by the  
 volume of gas produced. The  
 results are shown in the table  
 below.
